

EncryptDisc

CD/DVD Media with Built In Burning and Encryption

The one-step solution to secure data sharing and archival, EncryptDisc™ makes it easy to quickly and reliably use encrypted CD and DVDs. (Blu-ray coming soon) EncryptDisc is a fully integrated solution of high quality Imation brand CD and DVD media with built-in disc burning and government strength encryption from ENCRYPTX imaged on to the disc. No software to install or need to use third party burning and encryption software—everything is on your PC/the optical media.

- **Easy to use**
Simply insert the disc and establish a password when prompted, there's even password recovery if the disc creator forgets. Remote password recovery is an optional service
- **Automatic, powerful encryption**
With EncryptDisc you are guaranteed that your data is protected with government certified FIPS 140-2 Level 1 AES 256 bit encryption. EncryptDiscs cannot be written in the clear.
- **Securely share EncryptDiscs**
Users can easily share EncryptDiscs from PC to PC either as closed (CD ROM) or open discs for additional updates on the disc.
- **Optional central management**
Optional management software allows organizations to have fine grained security policy controls over how EncryptDiscs can be used, by whom, in and out of network, with reauthorization intervals, and full forensics audit tracking of what is stored on every EncryptDisc, the users that have access to them, and the events associated with the use of the disc. EncryptDiscs can be remotely disabled by Administrators if they are lost or stolen.

EncryptDisc™ is the only fully integrated optical media solution that allows enterprise users to securely and conveniently record sensitive business data and archival records on low cost CD/DVD storage with administrative control.

EncryptDisc Features

- Ultra durable, highest grade Imation® CD or DVD media
- Embedded software on the CD or DVD media. Burns and encrypts in one-step.
 - Built-in CD/DVD burning application
