

Rocky Mountain Ram is the authorized DOD DAR/GSA SmartBUY Vendor/IronKey

Now that the Department of Defense USB flash drive ban has lifted, are you ready? One product has all the features required to once again give DoD users the mobility and convenience of USB flash drives(reference Communications Tasking Order 10-004A). The highest security extends all the way from the point of manufacture (where a secure supply chain prevents malware infections) to the field (where administrators can remotely manage drives and even wipe data). IronKey drives are Data at Rest (DAR) approved, and meet or exceed all stringent new DoD CTO requirements for flash media.

Key features:

- Security FIPS 140-2 Level 3 validated tamper-resistant and tamper-evident design that includes secure key management in hardware
- Active malware defenses include AutoRun worm protection, a Read-Only mode that prevents infections from untrusted hosts, trusted network restrictions, and optional onboard AV/malware scanning
- Trusted supply chain — all research and development performed in the USA and boards built and drives assembled in secure facilities in the USA
- AES 256-bit hardware encryption in CBC mode automatically protects files

Find out why FEMA, the Department of Homeland Security, NATO and other organizations trust IronKey USB flash drives to protect mobile data. For more information on the world's most secure flash drive or to register for an IronKey webcast being held on March 17, 2010 at 2pm EST, visit IronKey at
